

SQL - 365 (Day - 1)

Q. Write a query to find the second highest salary.

Solution : - Window Function (Dense Rank) (Best way)

Window function will create a new temp column. then we use subquery as well.

⇒

SELECT *

FROM

(SELECT *, DENSE_RANK

OVER (ORDER BY salary
DESC) dm

FROM employees

) as subquery

WHERE dm = 2 ;

_____ x _____ x _____ x

Pre Requisite : - ① Window Function
② Subquery.
