8 Working On DDL command :-

9 Sonario :-   Managing a Book Database

```
CREATE TABLE Books (
        BOOKID INT PRIMARY KEY,
        Title VARCHAR (255),
        Author VARCHAR (225)
        Genre VARCHAR (100)
        Price DECIMAL (5,2)
```

∴ The CREAT TABLE statement is a DDL command that defines the Structure of a table named. 'Book'.

Note :- DDL command always be come with 'Table' becaus It work with table only.

(out side of Table, Database)

—————————X —————————X—————————

Going Slow because we Need to think why it is happening.

Now, you weend to add some books to youre 'Book' table.

This is where you would use a DML commands.

```
INSERT INTO Books (BookID, Author, title, Genre, Price)

VALUES (1, 'The Great Gratsby', F scott Fitzgerald', 1925, 'Fisction')
```

(added more data type)

That's why learning DDL and DML is important.
